

```

# =====
# MISO × Counties intersection → CSV
# =====
# Output columns:
# fips_code, county, state,
# area_county_km2, area_in_miso_km2,
# share_in_miso, percent_in_miso
#
# Usage:
# - Option A (URLs): just run as-is; it will fetch MISO via FeatureServer
# - Option B (local files): set paths below for MISO and/or Counties
#
